Employment and Educational Status of Recent Graduates

1981/82

SUPPLEMENT 2
TO THE
ANNUAL REPORT 1981/82
DENTAL AUXILIARY EDUCATION

Data for the supplemental report Employment and Educational Status of Recent Graduates, 1981-82 were gathered in the Annual Survey of Dental Auxiliary Education Programs, 1981-82. The percentages given here are based on only those graduates for whom employment and educational status was reported. The information reported in this supplement is divided as follows :

Table 1 Employment or educational status of 1981 dental hygiene educational program graduates with baccalaureate

Table 2 Employment or educational status of 1981 dental hygiene educational program graduates with diploma, certificate or associate degree

Table 3 Employment or educational status of 1981 dental assisting educational program graduates

Table 4 Employment or educational status of 1981 dental laboratory technology educational program graduates

Of the 872 dental hygienists who graduated with a baccalaureate, data on employment and/or educational status were reported only for 748 graduates. Of these 748 graduates, 91% were reported to be practicing in a private dental office; 5% were either teaching or in continuing education while practicing; 2% were engaged in various kinds of post-graduate endeavors while 2% were unemployed. Of the 693 dental hygienists graduated with a baccalaureate for whom post-graduate geographic location information was available, 87% remained in the same geographic area served by their respective

programs.

Of the 4,180 dental hygienists who graduated with other than a baccaluaureate, data on employment and/or educational status were reported for 3,592 graduates. Of these 3,592 graduates, 81.8% were reported to be practicing in a private dental office; 10.3% were either teaching or in continuing education while practicing; 0.5% worked in a clinic operated by a dental school or a public health agency; 3.2% pursued other post-graduate plans while 4.2% were reported to be unemployed. Of the 3,313 dental hygienists who graduated with other than a baccalaureate, for whom post-graduate geographic location information was reported, 78% remained in the same geographic area served by their respective programs.

Of the 5703 dental assisting graduates, data on employment and/or educational status were reported for 5332 graduates. Of these 5,332 dental assisting graduates for whom employment and/or educational status data were reported, 75% were practicing in a private dental office; 9% were either teaching or in continuing education while practicing; 3% were practicing either in a dental school or in a public health clinic; 9% pursued other post-graduate endeavors while 4% were reported to be unemployed. Of the 4,883 dental assisting graduates for whom post-graduate geographic location information was reported, 83% remained in the same geographic area served by their respective programs.

Of the 1063 dental laboratory technology graduates, data on employment and/or educational status were reported for 994 graduates. Of these 994 dental laboratory technology graduates for whom data on employment and/or educational status were reported, 8% worked in a private dental office; 61% worked in either a commercial or a dental school laboratory; 17% entered military or civil service; 5% continued their education; 6% pursued other post-graduate endeavors while 3% were reported to be unemployed. Of the 1,014 dental laboratory technology graduates for whom post-graduate geographic location information was reported, 69% remained in the same geographic location served by their respective programs.
